

ITQ establishes an exclusive partnership with cybersecurity leader NetClean, integrating Child Sexual Abuse Material detection software into their solutions

March 14, 2023 - Leading Benelux cloud technology company ITQ today announces a partnership with specialist cybersecurity provider NetClean. The deal establishes ITQ as the Benelux region's exclusive retailer of NetClean's CSAM (child sexual abuse material) detection software, helping ITQ customers to enhance their business resilience against the growing CSAM threat.

ITQ will deliver NetClean's technology as a managed service, providing ITQ customers with a single seamless solution that offers protection across Windows, iOS and Android operating systems, on mobile, laptop and tablets. The partnership will also provide customers with product management support and specialist advice in the sensitive scenarios that emerge from the detection of CSAM on a corporate device.

Anna Borgström, CEO, NetClean, said: "We're delighted to be embarking on this new chapter of our growth with ITQ. We know that the threat of CSAM has been accelerated by pandemic-driven changes in working patterns and that presents a challenge to the corporate, legal and commercial responsibilities businesses have. When it comes to self-protection, there are millions of reasons and no excuses."

Robert Hellings, CEO of ITQ, added: "Helping NetClean in Protecting what Matters, is a valuable addition to our company's sustainability policy and adheres very much to the people-focused company we are. Furthermore, we are fully aware that CSAM concerns additional risks in the customer's organizations. NetClean's key products – ProActive and ProTective – deliver a specific and absolutely critical dimension of cyber protection. We're pleased to be able to offer that to our customers, by exclusively partnering with a business that's also part of the VMware family."

This partnership is a significant step forward for ITQ's customer proposition, as well as demonstrating the company's commitment to detect and block access to CSAM and to report it responsibly.

About NetClean

NetClean creates technology products that protect businesses, enhance their resilience, and reduce real-world harm to children. The IT industry remains profoundly unprotected from the threats posed by child sexual abuse material (CSAM). With large-scale shifts to remote work due to the pandemic, companies are facing amplified risks and cracks in their protections. Statistics show that 1 in 500 employees use company devices to access CSAM and employees with this type of criminal behavior expose their workplace to threats such as cyber-attacks, blackmailing, and the dark web.

At ITQ, we love technology – but we're obsessed with your success.

We know that IT transformation isn't about the technology. It's about doing things faster, smarter and more flexibly to create better experiences for the people who come to you.

That's why at ITQ, we do everything with your business goals in mind, helping you to harness the power of technology to overcome your biggest business challenges, whether that's improving customer experiences, speeding up the delivery of key services or even improving your capacity to undertake your most valuable work.

What makes ITQ different?

ITQ is an end-to-end IT solutions provider and VMware specialist. We pride ourselves on our commitment to your success and ground our tech recommendations in the real-world value they create.

Real-world experience

Our hand-picked team of pros work to understand your business goals to help you maximize the value you get from your technology.

End-to-end capabilities

We focus on the outcomes first, supporting you from strategic planning through to technology roll-out and ongoing optimization.

Ongoing support

We offer a portfolio of expert managed services to keep your tech working smoothly day to day, so you can focus on tomorrow's success.

Our Approach

Whatever your challenges, we want you to succeed. So we'll work together on a step-by-step plan to elevate your business potential through personalized transformation services and optimized IT management.

1. Consult & Envision

We'll work closely to develop a strategic roadmap and align our technology to your business requirements, so you can reach your goals.

2. Build & Implement

Our experts will focus on implementing your chosen solutions effectively in a way that will create powerful and transformative business change.

3. Manage & Improve

You'll have consistent access to managed, reported & monitored services, as well as dedicated consulting to ensure proactive, continuous improvements with strategic improvement planning.

Our Solutions

We don't sell independent services: we sell 'solutions' to specific 'challenges'. We group these challenges and solutions into five key areas.

Application Modernization

Our flexible and resilient Multi-Cloud Container Platform will help your business become more agile, effective and customer centric. While Cloud-Native App Development means you can replace legacy apps and build a modern digital customer experience.

Advanced Security

With Backup & Disaster Recovery you can always be sure that your business will always stay operational. Our Managed Security Apps will immediately deal with any ransomware and cybersecurity threats to ensure business functionality is secure and online 24/7.

Cloud Infrastructure

With Data Center Modernization you can optimize your cloud securely with no vendor lock-in. And a multi-cloud platform will give your business a modern cloud model that is flexible, scalable and portable.

IT Transformation Service

With our IT Transformation Services (ITTS), we combine our VMware knowledge and experience in optimizing people, processes and organizations to unlock the full potential and value related to your VMware investments.

Digital Workspace

A Modern Cloud Workspace creates a better user experience and allows collaboration between both colleagues and customers. Having a High-Performance Cloud Workspace will allow your business to break free from the confines of the desktop with compatibility across devices, even for high-performance graphics and data computing-related tasks – providing secure access in real time.

Let us show you our love of tech.
